Constituents and additives

Effect on the potting soil

Pine bark	provides the potting soil with an extra coarse and aerated structure
Slightly decomposed raised-bog peat (white peat)	increases the air capacity and improves the structural stability
Coir chips	promote the air capacity of the potting soil and improve the structural stability
Lime (Calcium carbonate)	adapts perfectly the pH-value to the specific requirements of the plants
Top-Quality compound fertilizer	supplies the plants immediately with all macro and micro-nutrients
Micro-nutrient fertilizer Floraspur	supplies the plants additionally with micro nutrients

The product should be stored in a dry and cool place and protected against direct sunlight. Our advice would be to use up the product as soon as possible. When stored for a longer period of time, the product should be analyzed before it is used.
