## Chemical characteristics (at the moment of production)

pH-value (CaCl <sub>2</sub> )	5,6
Salt content (g/l)	1,5
N-nitrogen (CaCl <sub>2</sub> )	300 mg/l
P <sub>2</sub> O <sub>5</sub> -phosphate (CAL)	150 mg/l
K <sub>2</sub> O-potassium (CAL)	370 mg/l

## Recipe:

118321

**Hint for availability of nutrients:**  
The nutrients are sufficient for a period of up to eight week

- Peat free
- Organic
- Peat reduced

## Constituents and additives

## Effect on the potting soil

Slightly decomposed raised-bog peat (white peat)	increases the air capacity and improves the structural stability
Strongly decomposed raised-bog peat (black peat)	increases the water holding capacity and improves the water uptake
Organic wood fibres	loosen and aerate the potting soil and promote rooting of the plants
Bentonite of high sorption capacity	the fine granulation provides for an optimal distribution of the clay. Its high buffer capacity counteracts fluctuations of salinity and pH-value
Lime (Calcium carbonate)	adapts perfectly the pH-value to the specific requirements of the plants
Top-Quality compound fertilizer	supplies the plants immediately with all macro and micro-nutrients
Micro-nutrient fertilizer Floraspur	supplies the plants additionally with micro nutrients
Slow release nitrogenous fertilizer	supplies the plants with slow release nitrogen

The product should be stored in a dry and cool place and protected against direct sunlight. Our advice would be to use up the product as soon as possible. When stored for a longer period of time, the product should be analyzed before it is used. If questions occur, please get in touch with your contact person or the technical department of horticulture at Floragard (Tel. +49 441 2092-0).
